The Southwest.

EDITOR SENTINEL:-You had me reported from Arkansas last week, and must have been misinformed, I was in southern and central Missouri, in the interest of Atchison county, whose agent I am in a Swamp Land Indemnity c'aim held by that county, looking for a location to lay her indemnity certificate amounting to 3228 58-100 acres of land. Having been asked so often since my return concerning the country, etc., etc. I will take this means to answer a great many questions and at the the same time may interest some of your readers. Camden county, in winch I made a location of the above mentioned scrip, is located 120 miles cast, and 150 miles south of this place, hence the climate would be milder than here. The county is not as fine agricultural land as we have here, but tell me where you could go to better yourself in this regard? The land is some what broken and hilly, with fine land as will be found any where, along the valley of the Osage and other rivers. Timber, oak, of several varieties, hick ory and walnut predominate with some hard and soft maple, sycamore, elm, etc. The timber has no undergrowth, and fine grass, prairie blue stem and blue grass grows through the stretches of tumber and with small care large herdof cattle, sheep and hogs can be hand-

The so I on top of the hills or plateaus, is very fine being a vegetable loam or mold, and wil, when cleared of timber a rule these plateans a e tree of rock, in fact only exceptional cases. Rock crops out along the sides of the hills, but there is an abundance of soil here on the hillsides to produce a good heavy growth of clover or timothy. Water in abundance and of the choicest is here found in the springs of bright clear sparking water, and they are abundaut It is said there is not a section of land in the county which has not a spring on it or running across some portion of it. And let me tell you these springs are springs. The large's ring at Wm. Bank's is a mere infant when compared with hundreds of the springs here. There are single springs here which furnish water in sufficient volume and power to run a flouring mill. This is not guess work or hearsay, I saw this myself.

Lead, iron and zine are found in this county in abendance, also some silver ore. I have some specimens of lead ore that are nearly pure lead, taken from a "prospect" shaft su k. The population of the county is estimated at 10,000 to 12,000; the assessed valuation something over \$1,000,000 00, (1 have misplaced the exact figures) in Si politic sit is Republican. There are about 75,000 ceres of government land yet remaining in the county, subject to omestead or entry for each at \$1.25 and Greys. Never before less than per acre, while the county of Camden

or is also several thousand acres of sol lands that can be bought at from 1960 Yards All Worl Henriettas, 40 nches wide, all Spring Studies u . owing to the quality of the . I can not c ose without attempt ig ito "describe "Cave Spring" which · 's located in sou hwest part of the ounty, near Chainx Spring P. O This spring is located on top of a flor or will line of Black and Colored Gros Grain and Fan which vises about 100 feet above the which vi-es about 100 feet above the valley. There is a round hole or basin here about 50 feet in diameter, furnel 1500 Yards Satteens in All Colors. At this sale or V shaped, sides running at ar angle of about 45 ?; down about lif een feet from the top a tedge of tock p ojects from the west side, covering about onehall of the area of the basin. You enter from the east side, passing under this Checks will I rick and at about 30 cet below the surface, a. d. some 60 feet from where 2000 Yards Prints, all the best brands, solid yell first begin to descend, you find the everywhere surface, a d some 60 feet from where water. There are two s, rings, (or small (ivers) run in one from the northeast and the other from the southeast, with great sorce and volume, with a ripping, gurging sound that can be shawls. They are elegand and cheep ploinly heard by a person standing on the surface sixty or seventy feet distance There is no known outlet to 75c the e springs, except the conjecture that they have their outlet in a hole, or well still far her tack that has been sounded to a depth of 75 feet and "no b ttom " Medicin d q-alities are claim-

One wine pallon contains, solids, I odide as d Brounde of Magnesium 10:00 grain: Journe and promate of stages and along grant S Subducks of Lime 5.66 grants C Carleona e of Lime 5.22 grains Only of Broading 5.25 grains Chloride of Sodium 5.30 grains Organic and not determined bodies 5.30 grains

H. W. Wiley, U. S. Chemist:

An association from Ohio built hotel at this point with some fifty or sixty rooms, with the intention of making it a resert for those desiring to avail themselves of the water, but their agent proved to be som what of a scoundrel, and after fleecing them for some \$6,000 or \$8,000 decamped without surrendering his five year lease. This term is now nearly up, and the To those desiring more extended information, I will refer them to Hon A. R Jackson, representative for Camden R Jackson, representative for Camden GIVE county. Address Chimax Springs, Mo.

The Hottest Days.

The incomes and conditions of the gr. a'er part of the American people forbid their leaving permanent homes for any considerable length of time, and to such classes it is a matter of great and sometimes vital importance to know exactly what period of the year should be chosen, so that they shall obtain the greatest relief from extreme temperature during their brief summer outing. It too frequently happens that men and women having but a weeks' vacation are tempted by the first heatfore the maximum summer heat prevails. The sun is nearest the earth at the summer selstice, the 21st of June,

but the amount of heat receive. Ly & ; continues greater than that radiated y the lice, and they leave the premises at night for a considerable period after once, or it causes them to give up the the solstice, reaching its maximum when the amounts received from the sun by day and radiated into space by put all the grass into the silo and cut night are equal. It goes without sayall the grain with stalks? This question ing that the hottest single day, or even the hottest three days, for any summer bers of the family entirely on cannot be absolutely foretold, since this goods? Both questions can be answer. period may be slightly advanced or retarded by violent atmosphereic changes ir the shape of severe storms. The many ways in which it is cheaper to nal service of the army have been confeed dry grain alone. Again, hay is a tinued for such a number of years that good crop to self when the silo is in we can, however, speak with certain confidence, based on the normal daily temperatures, as to the dates on which tkree hottest days should fall. While ties of hard wood has been ascertained these dates vary in different sections of the country, it is sufficiently within the scope of this article to say that the hottest three days east of the Mississippi toot in diameter and 20 feet in height; river should occur between the 12th and 17th of July. If, therefore, any single week to be taken with the hope of escaping f. om extreme summer heat it should commence not later than the 10th of July.

Tarvel and residence in the extreme western part of the United States are 15th of August .- General A. W. Greely, in Scribner's, Magazine.
